RESEARCH INTERESTS

I am a prevention scientist investigating how to optimize investments in healthy development and well-being. This work sits at the intersection of human development, social policy, and public finance. My program of research is motivated by a desire to increase the use of cost-effective, evidence-based strategies to improve the lives of children and families. To accomplish this, my work aims to (1) strengthen methods for benefit-cost analyses of preventive interventions, (2) apply these methods to optimize investments in prevention as well as (3) develop best practices for how to translate these investments into evidence-based policies. In this manner, I seek to not only understand the costs, benefits, and return-on-investment of preventative interventions, but aim to create sustainable strategies to enhance wellbeing.
